

# SOCIAL JUSTICE SCHOOL

## **Annual Water Testing for Lead**

Our school operates out of modular trailer units, each of which is equipped with bottled water cooler dispensers for student and staff use. We do not have built-in drinking fountains or filtered water systems connected to the building's plumbing.

Because our drinking water is provided through sealed bottled water coolers rather than the school's water supply, **annual lead testing of drinking water is not required** for our campus.

If you have any questions regarding our water systems, safety procedures, or maintenance schedule, please feel free to contact our operations team.
